According to the American Heart Association (AHA), there are more than 295,000 cardiac arrests treated outside hospitals each year in the United States. Effective bystander Cardiopulmonary Resuscitation (CPR) can double or triple a victim's chance of survival. Defibrillation with an automatic external defibrillator (AED) can restore a normal heart rhythm.

- ▶ **Do you need to refresh your CPR skills?**
- ▶ **Are you ready to use an AED?**

Each year, our community comes together to learn about CPR and the use of AEDs. Each person learned the skills necessary to save a life and was challenged to teach these skills to five more individuals. Throughout our community, this knowledge has spread.

This year, our goal is to improve safety and heart education throughout Central Washington by teaching 1,000 members of our community to be prepared to save a life.

Sponsorship dollars will go toward providing a number of participants with a **FREE** American Heart Association CPR Anytime Kit with instructional DVD and CPR manikin to take home and share with family and friends.
